

Sliding Door ASSA ABLOY SL500 CGL

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in
door opening solutions

Alluring and inviting

Your Stylish Entryway Awaits

When you're looking to create a captivating and inviting entryway, look to the ASSA ABLOY SL500 CGL. The ASSA ABLOY SL500 CGL offers the same benefits as the powerful ASSA ABLOY SL500 standard sliding door...with an attractive all glass door to enhance the beauty of any doorway to provide an appealing and welcoming entrance.

Let your imagination soar to create an entrance of great distinction, elegance and grandeur. Available in single slide or bi-part with an array of widths and sizes, the ASSA ABLOY SL500 CGL is adaptable and flexible for your unique door opening and needs.

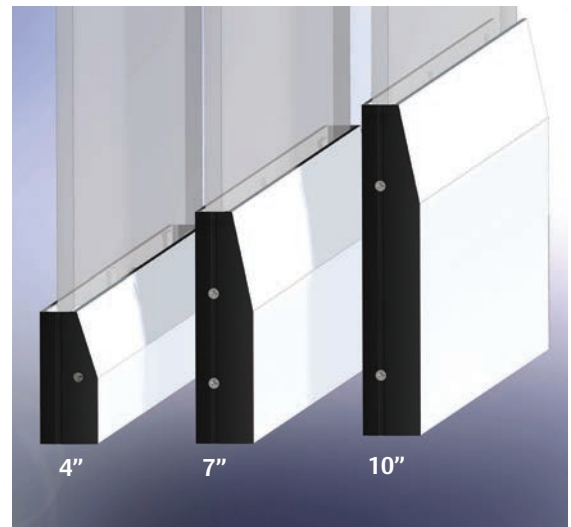

Great aesthetics meets great performance

The ASSA ABLOY SL500 CGL provides sleek styling with an unobstructed view to your entryway to create a spectacular image. Further enhance the aesthetics of your package by choosing a painted or clad finish or incorporate your corporate logo onto the glass via decal or etching.

The ASSA ABLOY SL500 CGL features the same powerful operator found in the standard ASSA ABLOY SL500 sliding door system. Its rugged design features 4" anti-riser derailment guides and dual tandem carriage wheels for superior performance. The dazzling aesthetics extend right up to the door header, with a sleek, tapered header design that sits flush mounted to both the interior and exterior for seamless integration.

The ASSA ABLOY SL500 CGL features an array of energy savings features including a low energy consumption operator, separate time delays for sensors and key access, and optional magnetic catches to close and latch doors after small bumps cause an automatic sliding door to be open and non-operational.

The door system and package features the ease of service you have come to expect from ASSA ABLOY products including inconspicuous bottom rail mechanical locks which allow lock cylinder replacement without having to remove the door and a non-handed bottom foot guide...adjustable without removing the door. Other serviceability features include a removable service cover, visual error and inspection reminders, and fail safe sensor monitoring.

Choose the bottom rail that suits your needs and design requirements
